H&E solutions

Smart communication for better
visibility and traffic safety

EVAM System™ is a smart communication system

VAD?

EVAM System™ is a smart communication system

HUR?

Local transmission unit operating through RDS and FM-radio gives local warning messages to motorists

INNOV-
ATION?

Novel technique for redirection results in an effective system

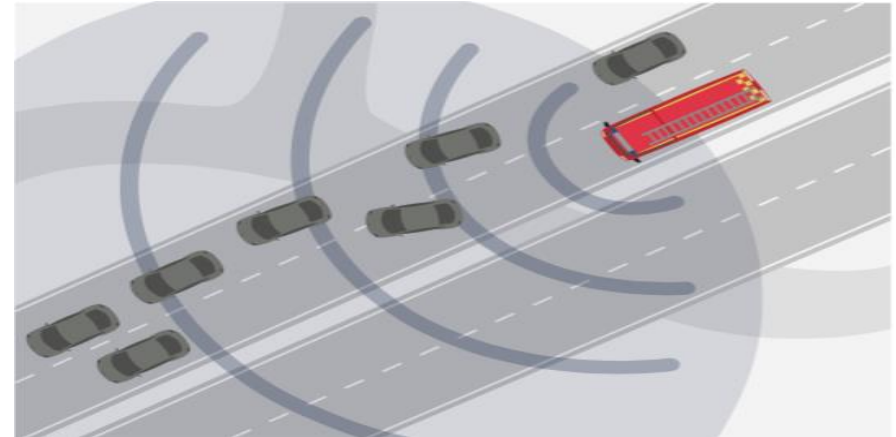

EVAM System™ has two main functionalities for mobile and stationary use

EVAM™ at stationary use

- Early warning for approaching vehicles

EVAM™ at mobile use

- Transmission area is automatically adjusted according to the situation

A compatible, simple and intelligent system

Compatible

- EVAM™ is compatible with most control systems on the market

Simple installation

- EVAM™ is compact and delivered with antenna that is easily integrated

Intelligent

- EVAM™ has intelligent algorithms for for effective communication

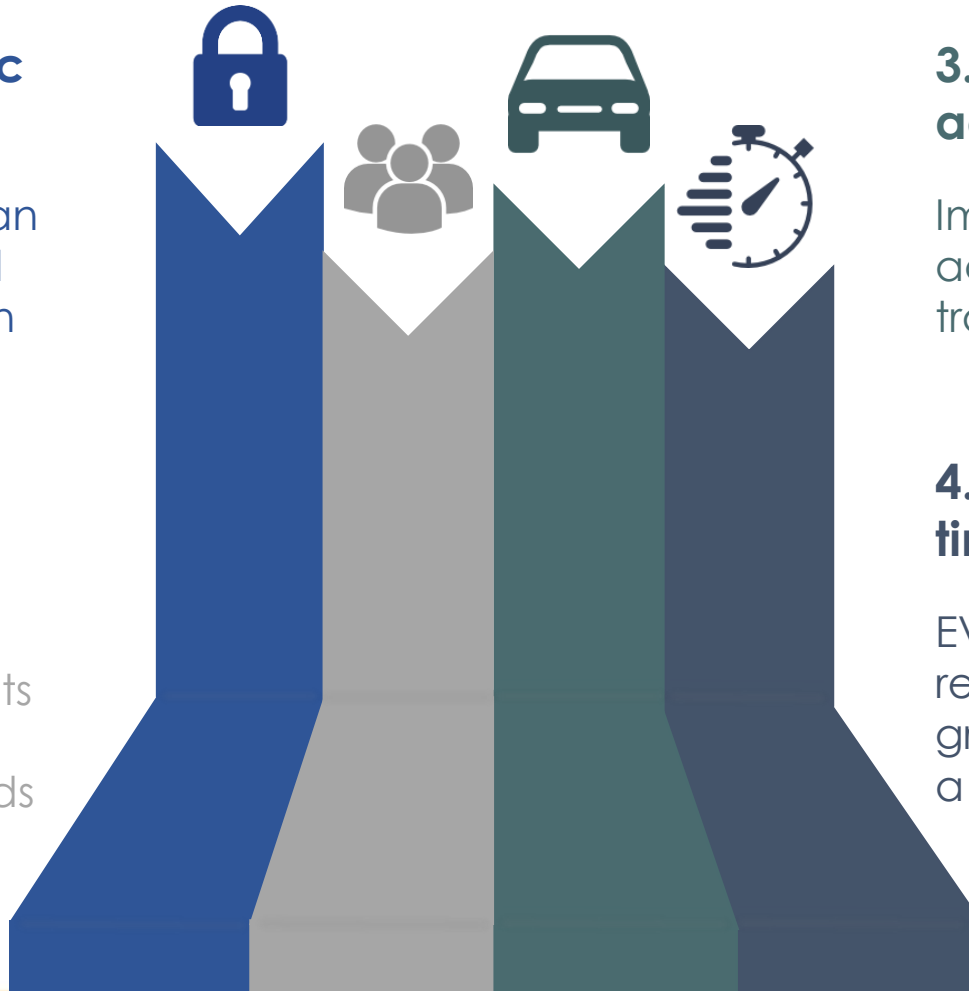

EVAM System™ creates large value

1. Improved traffic safety

Motorist are given an earlier warning and can therefore act in a safer way

2. Improved working environment

The risks of accidents at or around a working site on roads can be minimized

3. Improved accessibility

Improved accessibility through traffic

4. Shorter response times

EVAM™ shortens response times for a group where time is a critical factor

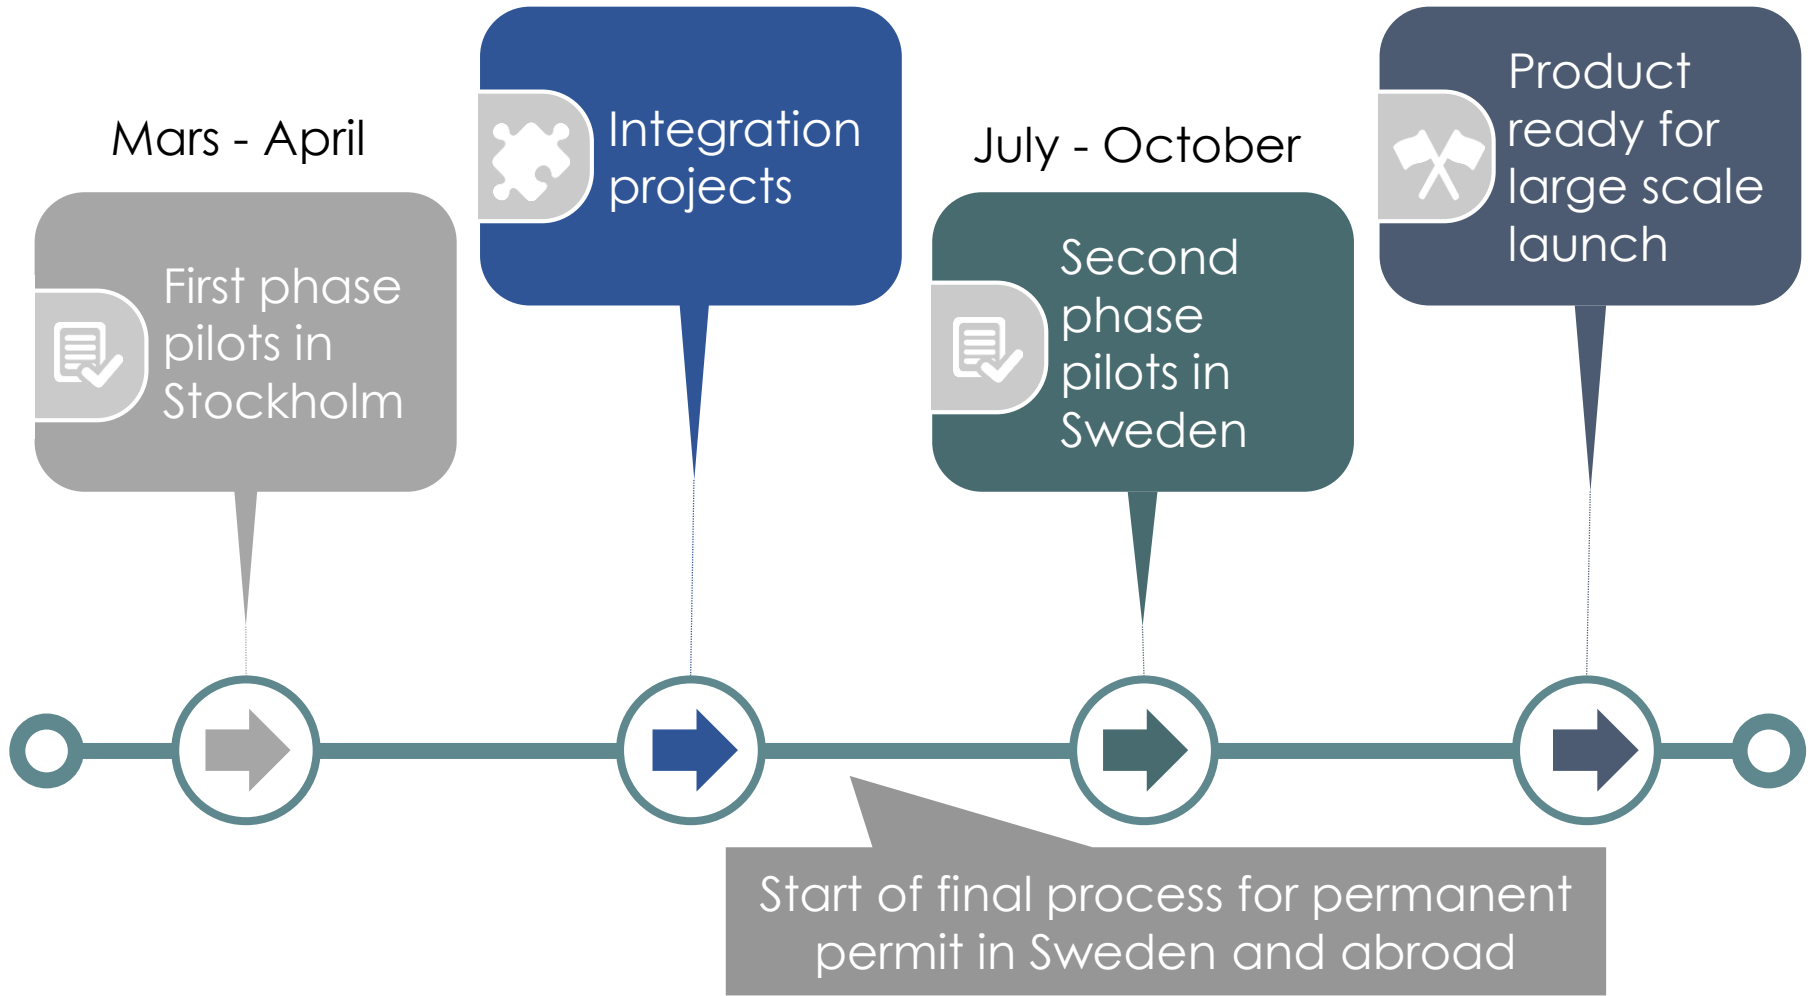

Current state

- Problem verification against 80% of Swedish market
- Seven partners in ambulance and fire participating in pilots
- Integration projects with other equipment manufacturers soon to be announced
- Product developed and ready for small scale pilots
- Granted initial permits for pilot tests

Time plan for development and launch

April – February 2018

March 2018
