

An aerial photograph of a city street, likely in a European city, showing a mix of old and new buildings, a river, and a road intersection. The image is used as a background for the presentation slide.

REDUCING PEDESTRIAN FALLS

Jenny Eriksson

vti

The Swedish National Road and Transport Research Administration

WHO IS A PEDESTRIAN?

- Normally, walking on foot

In Sweden we also include persons using:

- Kick-bikes
- Skateboards
- Inlines
- Wheelchairs

Photo: Jenny Eriksson

DEFINITION - PEDESTRIAN FALLS

- It's not defined as a road traffic accident because no other vehicle was involved.
- But! It could involve an interaction with other road users, such as make way.

REDUCING PEDESTRIAN FALLS - TARGET IN SWEDEN

The Vision Zero Collaboration Group decided this target:

Reduce the number of seriously injured pedestrians in falls in road traffic by 25 % between 2020 and 2030

should be tracked in the same systematic manner as the government's interim targets.

SWEDISH DATA AND DEFINITION

- Data collected at A&Es (all units in Sweden)
- Includes self reported data as well as data from medical records.
- Injury severity: Classified by health care professionals using AIS-codes
- Though in Sweden we use the definition “Seriously injured”: Someone who has suffered at least a 1% permanent medical impairment as a result of a road traffic accident. It’s based on AIS-codes.

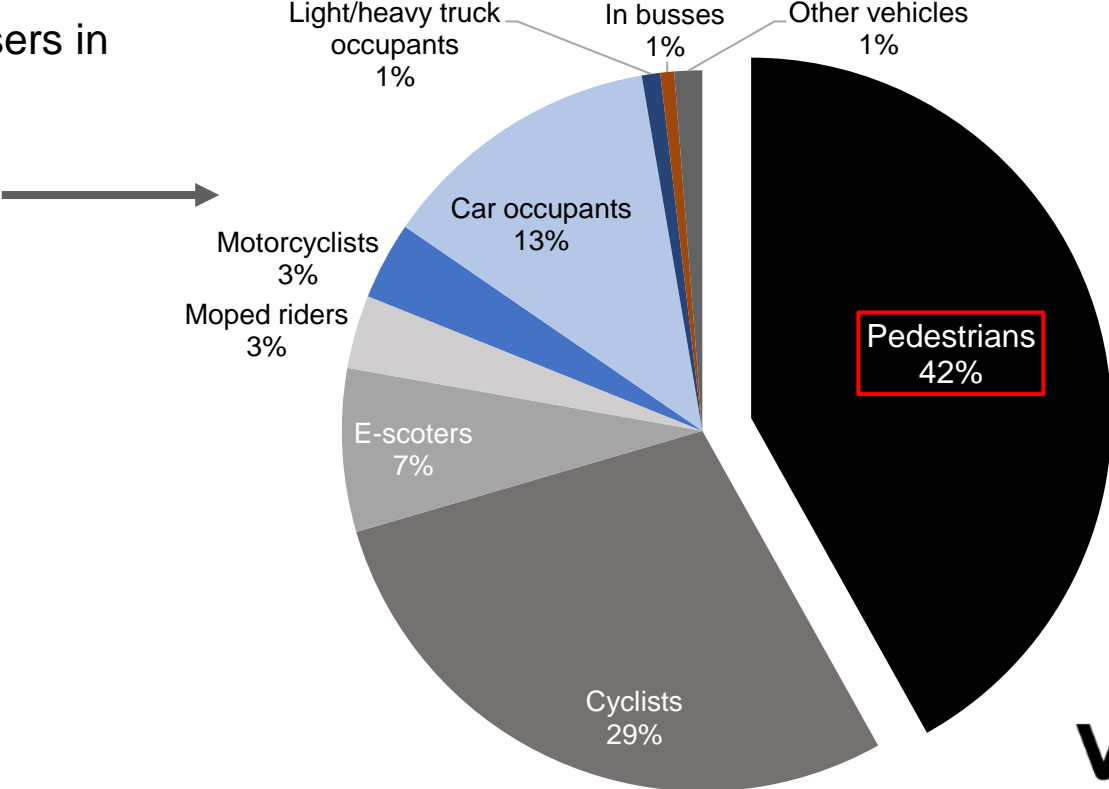

How to calculate Seriously injured:

Malm, S., Krafft, M., Kullgren, A., Ydenius, A., & Tingvall, C. (2008). Risk of permanent medical impairment (RPMI) in road traffic accidents. *Ann Adv Automot Med*, 52, 93-100.

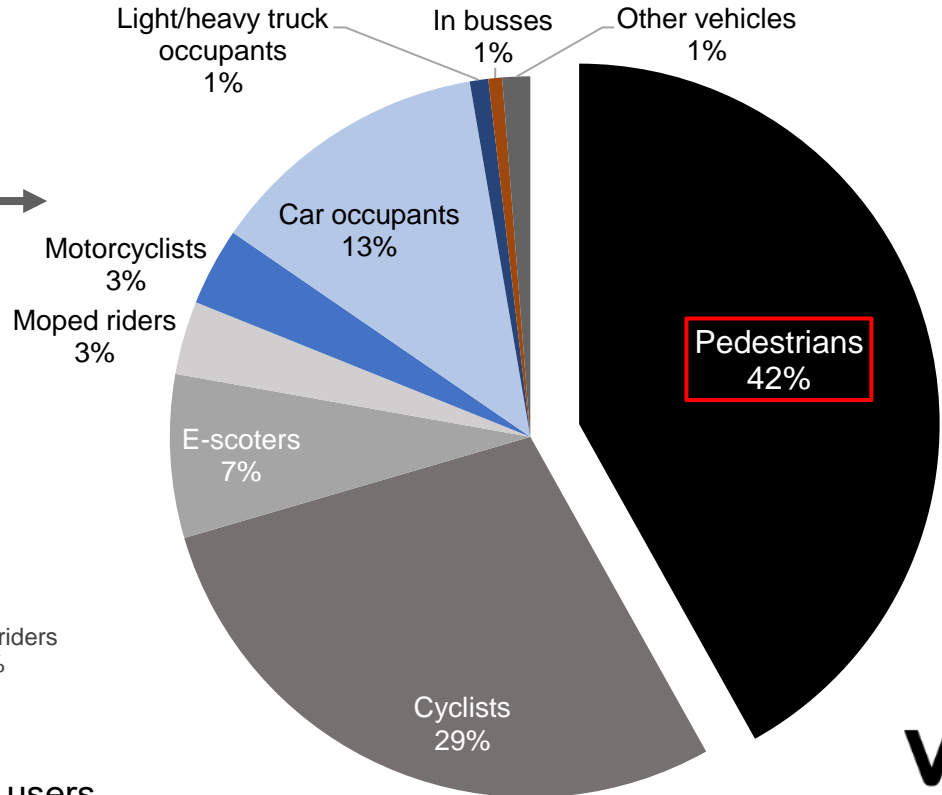

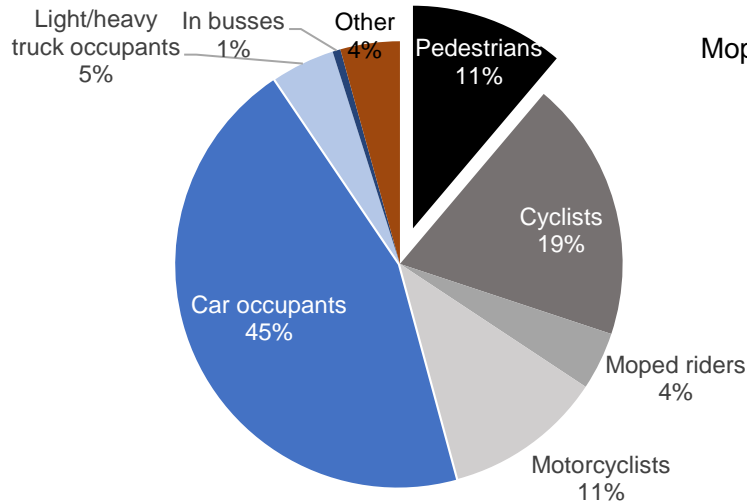

SERIOUSLY INJURED ROAD USERS, 2022

- 37,000 registered road users in Strada hospital (A&Es)
- 7,600 seriously injured, pedestrian falls included

SERIOUSLY INJURED ROAD USERS, 2022

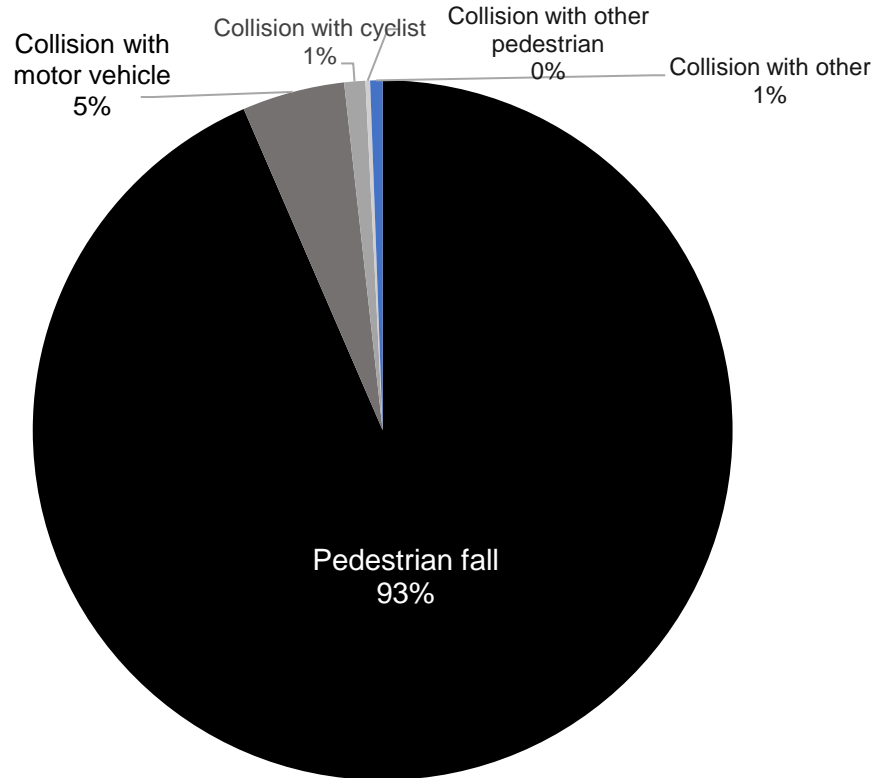

- 37,000 registered road users in Strada hospital (A&Es)
- 7,600 seriously injured, pedestrian falls included

1,924 police reported “seriously injured” road users

TYPE OF ACCIDENT, 2022

Number of seriously injured pedestrians: 3,200

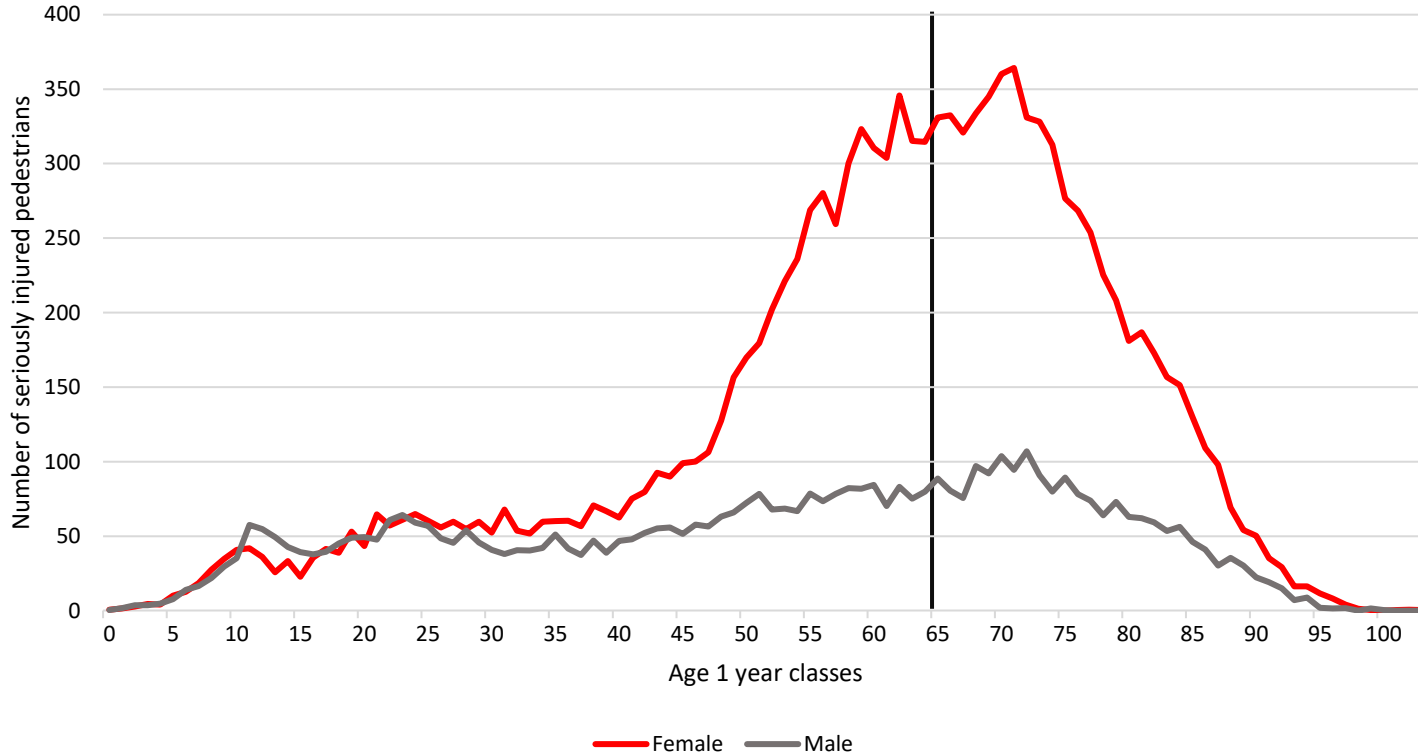

PEDESTRIAN FALLS, AGE-DISTRIBUTION

PEDESTRIAN FALLS, GENDER AND AGE

THREE COMMON CAUSES

- Slippery road surface due to ice/snow (60 %)
- Uneven surface/potholes (17 %)
- Stumbled on a curb (10 %)

INJURIES, WERE ON THE BODY?

	All injuries (N=99,032)	Seriously Injuries (N=20,002)	EU-standard, AIS 3+ (N=4,042)
Head	4%	3%	15%
Face	2%	1%	3%
Upper extremity	35%	54%	7%
Thorax	1%	0%	4%
Spine	1%	2%	3%
Lower Extremity and Pelvis	18%	36%	51%
External (skin) and Thermal injuries	38%	3%	17%
Total	100%	100%	100%

PEDESTRIAN FALLS – FATALLY INJURED

- Are not included in the official statistics.
- In Strada hospital-database there were 61 registered fatally injured pedestrians during 2014-2019. At least 29 of those were due to the accident.
- Most elderly 75+ (70%), 65-74 (14%). Common: Falling and hit the head. Some of them hitting the head against a curb, or when slipping on ice/snow.
- Compare to 220 pedestrians who were fatally injured in collisions during the period.

**Source: Strada
hospital (A&Es)**

SUMMARY – PEDESTRIAN FALLS

- The most common group (42 %) of seriously injured road users
- More than 90 % was caused due to a fall
- Women 50+ are overrepresented
- Elderly, yes, but also in working age
- If you don't measure, then you don't know!

The costs of pedestrians falls in traffic environment are estimated to be SEK 40 billions (approx. EUR 3.5 billions) per year

ACTIONS TO REDUCE THE NUMBER OF INJURED

- Better (winter) maintenance
- Good evenness on the surface
- Spikes on shoes/better shoe soles
