

25%
of all road deaths in the EU are **ALCOHOL-RELATED**

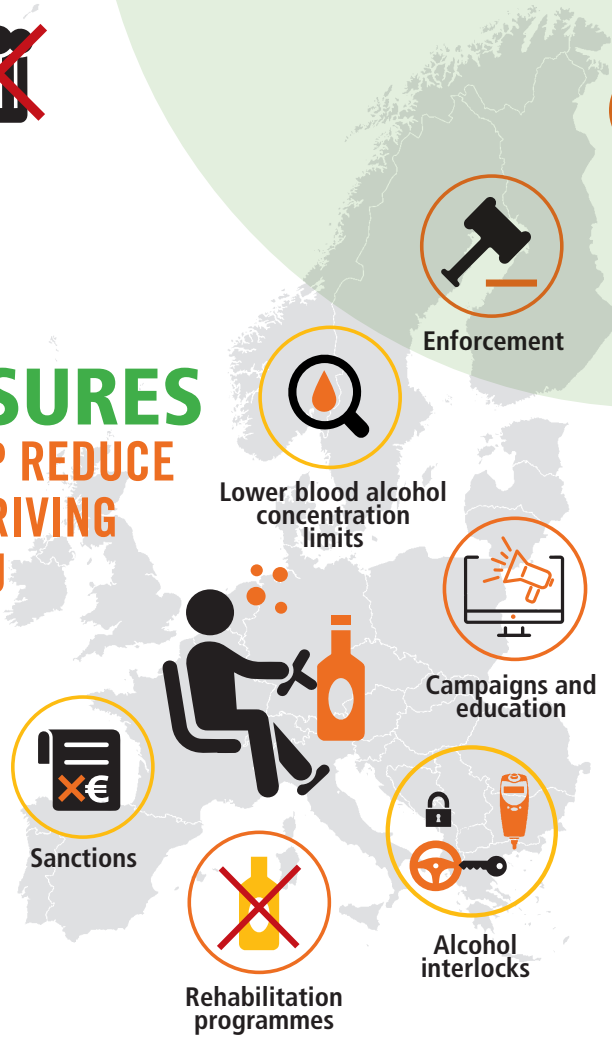

At least **5,000 DEATHS** would have been prevented in 2018 if all drivers had been **SOBER**

-25% reduction in road deaths due to alcohol between 2010 and 2018 in the EU. Other road deaths went down by 20% over the same period.

SEVERAL KEY MEASURES CAN HELP REDUCE DRINK-DRIVING IN THE EU

RECOMMENDATIONS

- ✓ Improve data collection of alcohol-related road deaths. Mandate systematic testing of all road users involved in a collision with injury.
- ✓ Consider adopting a zero tolerance level (i.e. a maximum BAC of 0.2g/l) for all road users.
- ✓ Intensify enforcement. Couple enforcement with publicity activities.
- ✓ Develop use of alcohol interlocks as part of rehabilitation programmes for first time high-level and recidivist offenders.
- ✓ Mandate the use of alcohol interlocks for professional drivers.
- ✓ Run regular campaigns.
